The Hawkes-Luby-Touton

First Course in Algebra (Revised Edition)

The entire text has been rewritten and greatly simplified; new problems and exercises have been added; much simple oral drill is a feature. Altogether this book leaves little to be desired as a working text for first-year algebra classes.

Second Course in Algebra (Revised Edition)

As in the "First Course" the revision has been made for the purpose of simplifying the text. Determinants, zero and infinity, mathematical induction, and supplementary topics have been omitted. The introductury review material has been rearranged. The exercises and problems, mainly new, have been carefully graded. Work on radical equations, simultaneous equations, logarithms, and the binomial theorem, has been considerably simplified. The graphical work is shortened. (In press.)
